## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and 4 are rejected under 35 U.S.C. 102(a) as being anticipated by Wada et al. (WO 03/009314A1).

Regarding claim 1, Wada discloses a composite material including a high-thermal-conductor (14) and a room temperature magnetic refrigerant material (16), wherein the room temperature magnetic refrigerant material (16) is nested with the high-thermal-conductor (14) to obtain the composite material (see Fig. 9).

Regarding claim 4, Wada discloses the room temperature magnetic refrigerant material (16) having been processed to sheets (see Fig. 9), the high-thermal-conductor (14) having been inserted between the sheets, and the high-thermal-conductor and the sheets contact each other closely (see Fig. 9).

3. Claims 1 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Wada et al. (US 6,826,915). *See column 12, lines 21-40 for further clarification.*

Regarding claim 1, Wada discloses a composite material including a high-thermal-conductor (14) and a room temperature magnetic refrigerant material (16), wherein the room temperature magnetic refrigerant material (16) is nested with the high-thermal-conductor (14) to obtain the composite material (see Fig. 9).

Regarding claim 4, Wada discloses the room temperature magnetic refrigerant material (16) having been processed to sheets (see Fig. 9), the high-thermal-conductor (14) having been inserted between the sheets, and the high-thermal-conductor and the sheets contact each other closely (see Fig. 9).

***Allowable Subject Matter***

4. Claims 2, 3, and 5-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited on the attached PTO-892 are cited to show magnetic refrigerant material composites and stacked sheets in a heat exchanger.
